## DRY BREAK COUPLERS

---

**B.G. INDUSTRIAL'S** dry break couplers are the only quick release ink connectors utilized in the newspaper industry that have no ink drip after the fittings are disconnected. These quick release connectors are used in a variety of applications where interchangeability of different inks and colors are required on a regular basis. Listed are the unique features of this easy to use connector.

**Fittings Disconnected**

**Fittings Connected**

---

### **FEATURES AND BENEFITS**

- DURABILITY** -- High quality manufacturing of this fitting makes it last longer than comparable connectors.
- EASY ON / OFF CONNECTION** -- The spring loaded locking collar located on the female coupler gives this fitting a snap connection and release characteristic that is unique to this coupler. This feature eliminates the need to use tools, pinch bars or hammers to tap fittings that could be difficult to connect or separate. It also eliminates potential damage to the fittings.
- LESS INK DRIP** -- There is virtually no ink present on the connection faces both fittings after they have been disconnected. The flat surfaces of the connection are easy to wipe with a rag. This characteristic reduces overall ink waste and in-house cleaning.
- EASY CONVERSION** -- B.G. Industrial's dry break couplers are easy to retrofit to existing press equipment and press equipment accessories.
- LESS DOWNTIME AND CLEAN-UP** -- The cleanliness of the B.G. dry break couplers minimizes the amount of in-house cleanup that would normally be required with the older quick release connectors. Less clean-up also speeds-up servicing of equipment during maintenance and repair periods.
